

Connect to JIRA and fetch the user stories

Context

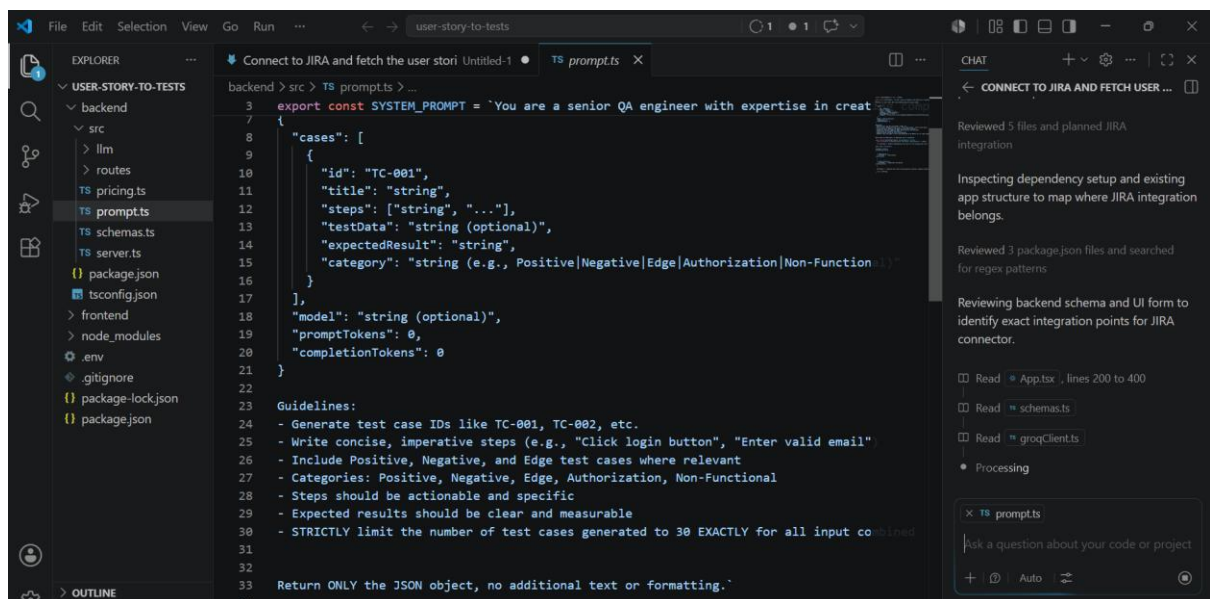

Act as a Senior Engineer and provide the solution to connect the JIRA and fetch the user stories

Frontend

Create a connector for JIRA in the UI with email, API Token with the Connect button

Analyse the code shows the impacted files

for the below implementation go step by step upon my approval and proceed for the further steps

## Suggested next action

If you agree, I can proceed with the first implementation step:

1. add the JIRA connector UI and state in [App.tsx](#)
2. add new frontend API functions in [api.ts](#)
3. add JIRA types in [types.ts](#)

Please approve or tell me if you want to include Jira Site URL as part of the connector.

## Proposed immediate action

If you want, I can now provide the exact code structure for:

1. [App.tsx](#)
2. [api.ts](#)
3. [types.ts](#)

Then we can move to backend route and schemas.

Upon click on Fetch JIRA Stories, Getting the below error message (Due to I don't have stories in JIRA)

## Update the code

localhost:5173

### Generated Test Cases

30 test case(s) generated • Model: llama-3.3-70b-versatile • Input tokens: 442 • Output tokens: 2429 • Cost: \$0.002180 (est.)

| Test Case ID | Title                     | Category       | Expected Result                                    |
|--------------|---------------------------|----------------|----------------------------------------------------|
| ▶ TC-001     | Queue Auto-Refresh        | Positive       | Queue is refreshed within 30 seconds               |
| ▶ TC-002     | Emergency Filter          | Positive       | Only critical patients are displayed               |
| ▶ TC-003     | Scroll Position Retention | Positive       | Scroll position is retained after refresh          |
| ▶ TC-004     | Filter Retention          | Positive       | Filters are retained after refresh                 |
| ▶ TC-005     | Invalid Filter            | Negative       | Error message is displayed for invalid filter      |
| ▶ TC-006     | No Patients               | Edge           | Queue remains empty after refresh                  |
| ▶ TC-007     | Large Number of Patients  | Edge           | Queue still displays all patients after refresh    |
| ▶ TC-008     | Unauthorized Access       | Authorization  | Access is denied to the queue                      |
| ▶ TC-009     | Performance Test          | Non-Functional | Queue still refreshes within 30 seconds under load |

## Updated Files:

### 1. [jiraClient.ts](#)

- Fixed JIRA API endpoint from `/rest/api/3/search` → `/rest/api/3/search/jql`
- Added detailed logging (`console.log` statements) to track JIRA searches
- Added `maxResults=100` parameter for pagination
- Improved error handling with full response details

### 2. [jira.ts](#)

- Added logging to track incoming JIRA requests
- Enhanced error messages with detailed context
- Improved debugging output for troubleshooting

That's it! Only 2 files were modified. These changes fixed the JIRA story fetching issue by using the correct API endpoint that Jira Cloud v3 currently supports.
