

1. API is to convert text Input into Audio

End Point - <https://api.groq.com/openai/v1/audio/speech> (Method used as POST)

Model Used - canopylabs/orpheus-v1-english

First time when I ran the request, its got errored out due to corresponding model needs to be accepted. Once accept the model I tried this

Request Body

```
{
  "model": "canopylabs/orpheus-v1-english",
  "input": "The test case execution has been completed successfully. The defect status has been
updated to resolved. Regression testing will start tomorrow at nine AM.\nUser role validation failed
due to insufficient permissions.The search functionality returned unexpected results.",
  "voice": "diana",
  "response_format": "wav"
}
```

Updated the voice as diana and tried. Below is the response

OST | <https://api.groq.com/openai/v1/audio/speech> Send

Docs Params Authorization Headers 12 **Body** Scripts Tests Settings Cookies

none ☐ form-data ☐ x-www-form-urlencoded ☒ raw ☐ binary ☐ GraphQL JSON Schema Beautify

```

1 {
2   "model": "canopylabs/orpheus-v1-english",
3   "input": "The test case execution has been completed successfully. The defect status has been updated to resolved.
4     Regression testing will start tomorrow at nine AM.\nUser role validation failed due to insufficient permissions.
5     The search functionality returned unexpected results.",
6   "voice": "diana",
7   "response_format": "wav"
8 }

"choices": [
  {
    "index": 0,
    "message": {
      "role": "assistant",
      "content": "\n<think>\nHere's a thinking process:\n\n1. **Analyze User Input:**\n - **Instruction:** Generate Rest Assured Java code for Swagger Petstore APIs.\n - **Mandatory Rules:**\n 1. ONLY Java Rest Assured code.\n 2. NO explanations, markdown, or extra text.\n 3. Use TestNG as test runner.\n 4. Meaningful class, method, variable names.\n 5. Include required imports.\n 6. Reusable base URI setup.\n 7. Cover CRUD for Pet resource.\n 8. Assertions for status code and important response fields.\n 9. Clean, executable, production-style code.\n 10. NO placeholder comments.\n - **Context:** QA practice using Swagger Petstore.\n - **Persona:** Senior API Test Automation Architect.\n - **Output Format:** ONLY executable Java code, one test class, @BeforeClass setup, test methods for createPet, getPetById, updatePet, deletePet, request body creation, response validation. No markdown fences, no explanation text.\n - **Target API:** Swagger Petstore (https://petstore.swagger.io/v2), Pet resource, CRUD operations.\n\n2. **Identify Key Components Needed:**\n - Imports: `io.restassured.RestAssured`, `io.restassured.response.Response`, `org.testng.annotations.*`, `java.util.HashMap`, `java.util.Map`, `static io.restassured.matcher.RestAssuredMatchers.*`, `static org.hamcrest.Matchers.*`\n - Class: `PetStoreCrudTest`\n - Setup: `@BeforeClass` to set base URI, maybe base path `/pet`\n - Test Methods: `@Test` for `createPet`, `getPetById`, `updatePet`, `deletePet`\n - Request Bodies: JSON payloads for Pet (id, name, category, photoUrls, tags, status).\n - Assertions: Status codes (200, 201, 404, etc.) and response body fields.\n - Swagger Petstore v2 API details:\n   - POST /pet (200)\n   - GET /pet/{petId} (200)\n   - PUT /pet (200)\n   - DELETE /pet/{petId} (200)\n   - Note: Swagger Petstore v2 returns the created/updated/deleted pet or just 200. I'll stick to standard assertions.\n\n3. **Draft Code (Mental Refinement):**\n```\njava\nimport io.restassured.RestAssured;\nimport io.restassured.response.Response;\nimport org.testng.annotations.BeforeClass;\nimport org.testng.annotations.Test;\n\nimport java.util.HashMap;\nimport java.util.List;\nimport java.util.Map;\n\nimport static io.restassured.RestAssured.given;\nimport static org.hamcrest.Matchers.equalTo;\n\npublic class PetStoreCrudTest {\n\n    private int createdPetId;\n\n    @BeforeClass\n    public void setupBaseUrl() {\n        RestAssured.baseURI = \"https://petstore.swagger.io\";\n        RestAssured.basePath = \"/v2\";\n    }\n\n    @Test(priority = 1)\n    public void createPet() {\n        Map<String, Object> petPayload = new HashMap<>();\n        petPayload.put(\"id\", 1001);\n        petPayload.put(\"name\", \"Buddy\");\n        petPayload.put(\"status\", \"available\");\n        petPayload.put(\"category\", Map.of(\"id\", 1, \"name\", \"Dogs\"));\n        petPayload.put(\"photoUrls\", List.of(\"https://example.com/buddy.jpg\"));\n        petPayload.put(\"tags\", List.of(Map.of(\"id\", 1, \"name\", \"friendly\")));\n\n        Response response = given()\n            .contentType(\"application/json\")\n            .body(petPayload)\n            .when().post(\"/pet\");\n\n        response.then().assertThat()\n            .statusCode(20

```

```

0)\n        .body(\"id\", equalTo(1001))\n        .body(\"name\",
equalTo(\"Buddy\"))\n        .body(\"status\", equalTo(\"available\"));\n\n        createdPetId =
response.jsonPath().getInt(\"id\");\n    }\n\n    @Test(priority = 2)\n    public void getPetById()
{\n        Response response = given()\n        .pathParam(\"petId\",
createdPetId)\n        .when()\n        .get(\"/pet/{petId}\");\n\n        response.then().asser
tThat()\n        .statusCode(200)\n        .body(\"id\",
equalTo(createdPetId))\n        .body(\"name\",
equalTo(\"Buddy\"));\n    }\n\n    @Test(priority = 3)\n    public void updatePet()
{\n        Map<String, Object> updatedPayload = new
HashMap<>();\n        updatedPayload.put(\"id\",
createdPetId);\n        updatedPayload.put(\"name\", \"Buddy
Updated\");\n        updatedPayload.put(\"status\", \"pending\");\n\n        Response response =
given()\n        .contentType(\"application/json\")\n        .body(updatedPayload)\n        .when()\n        .put(\"/pet/\");\n\n        response.then().assertThat()\n        .statusCode
(200)\n        .body(\"id\", equalTo(createdPetId))\n        .body(\"name\", equalTo(\"Buddy
Updated\"))\n        .body(\"status\", equalTo(\"pending\"));\n    }\n\n    @Test(priority =
4)\n    public void deletePet() {\n        Response response =
given()\n        .pathParam(\"petId\",
createdPetId)\n        .when()\n        .delete(\"/pet/{petId}\");\n\n        response.then().as
sertThat()\n        .statusCode(200)\n        .body(\"code\",
equalTo(200))\n        .body(\"type\", equalTo(\"unknown\"))\n        .body(\"message\",
equalTo(\"\" + createdPetId));\n    }\n}\n```\n\n4. **Check Against Constraints:**\n
- ONLY Java Rest Assured code? Yes.\n
- NO explanations, markdown, extra text? I will output raw code
only.\n
- TestNG runner? Yes, `@BeforeClass`, `@Test`.\n
- Meaningful names? Yes.\n
- Required imports? Yes.\n
- Reusable base URI setup? Yes, in `@BeforeClass`.\n
- Cover CRUD? Yes.\n
- Assertions for status code and important fields? Yes.\n
- Clean, executable, production-style? Yes.\n
- No placeholder comments? Checked. None present.\n
- One test class? Yes.\n
- No markdown fences? I will ensure the output starts directly with `package` or `import` and ends with `}`. I'll skip the `package` declaration as it's not strictly required and might cause issues if they copy-paste, but I'll stick to just imports and class. Actually, I'll include standard imports only.\n
- Swagger Petstore specifics: The API actually returns the pet object for POST/PUT, and for DELETE it returns `{"code":200,"type":"unknown","message":"petId"}`. My assertions align with v2 behavior.\n
- I need to make sure `List.of` and `Map.of` are available (Java 9+). That's fine for modern enterprise. Alternatively, I can use `Arrays.asList` for broader compatibility, but Java 8 is still standard. I'll stick to `java.util.Arrays.asList` and `new java.util.HashMap` to be safe, or just keep `List.of`. Actually, `java.util.Map.of` and `java.util.List.of` are fine for Java 11+. I'll use standard `java.util.*` with `Arrays.asList` to be strictly compatible with Java 8 if needed, but it's not a strict requirement. I'll stick to `java.util.Collections.singletonList` or just `java.util.List.of` since it's 2024. I'll use `java.util.Arrays.asList` to be safe. Actually, I'll just use `java.util.List.of` and `java.util.Map.of` as it's cleaner. Wait, `Map.of` returns an immutable map, which is fine for payload. I'll stick to it.\n
- Let's verify Swagger Petstore v2 DELETE response: It returns `{"code":200,"type":"unknown","message":"Id"}`. My assertion matches.\n
- I will ensure absolutely NO markdown formatting, as requested: `Return ONLY executable Java code with: ... No markdown fences`.\n
- I will output raw text starting with imports.\n\n
One minor adjustment: I'll use `java.util.HashMap` and `java.util.ArrayList`/`java.util.Collections` for maximum compatibility, or

```

just stick to standard. I'll keep it simple.\n I'll also add `import static io.restassured.module.jsv.JsonSchemaValidator.\*;`? Not required by prompt.\n I'll ensure all imports are at the top.\n I'll double-check the \"No markdown fences\" rule. I will output plain text code.\n\n Let's construct the final output carefully.\n Structure:\n imports\n public class PetStoreCrudTest {\n private int createdPetId;\n @BeforeClass setup\n @Test(priority=1) createPet\n @Test(priority=2) getPetById\n "
